01 · SUMMARY

AI named Cheezious in 9 of 60 answers. Pizza Hut was named in 23.

When people in Rawalpindi asked AI where to order pizza, Cheezious came up in 15% of answers. AI knows you as an affordable option, but it has little to say about your quality, delivery speed or branches, and it never used your own website.

Visibility score	Answers naming you	Rank among 5 tracked	Your website used
15/100	**9** of 60	**#3**	**0** times
Up 2 vs previous 30 days	In 6 of 10 questions	Leader: Pizza Hut, 38	Other pizza sites: 26 times

The short version

WHAT AI KNOWS

You are a value pick with fair prices. Most of what AI knows comes from Foodpanda, TripAdvisor and one food blog.

WHY YOU ARE BEHIND

Pizza Hut and Domino's have complete Google listings and more reviews. AI can quote them; it cannot quote you.

WHAT FIXES IT

Put your facts where AI reads: your website, Google profiles and Foodpanda. Then earn reviews about quality and speed.

What to do first

1. **Get your own website used as a source**
   Where: your website. Branch pages with menu, prices and delivery areas as plain text.

2. **Complete a Google Business Profile for every branch**
   Where: Google. Google fed 10 answers and named you in none.

3. **Win the freshness and quality questions**
   Where: website, food blogs, TripAdvisor. All six fixes start on page 5.

02 · WHAT AI KNOWS ABOUT YOU

AI sees Cheezious as a value option, and knows little else

We read all 60 answers. This is the picture AI builds of your business today.

What AI says about you

Known for

Affordable pizza and fair prices

Named in 5 of 18 answers about price.

Trusted by

A local food blog and review sites

thecookbook.pk named you in 7 of 11 answers.

Found through

Foodpanda and TripAdvisor

6 answers each came through these sites.

What AI does not know

Your menu, prices and branches	Your website was never used as a source.	**Fix 1**
Your Google listings and ratings	Google fed 10 answers, none named you.	**Fix 2**
How fresh your food is	Named in 1 of 18 quality answers.	**Fix 3**
How fast you deliver	Named in 0 of 12 delivery answers.	**Fix 5**

What a customer actually heard

When AI named you

[Short excerpt from a real AI answer that recommended Cheezious]

[Engine] · [Date] · [Question]

When AI named a competitor instead

[Short excerpt from a real AI answer that recommended Pizza Hut]

[Engine] · [Date] · [Question]

03 · WHY YOU ARE BEHIND

Pizza Hut and Domino's give AI more to work with

Pizza Hut was named in 23 of 60 answers, Domino's in 17 and Cheezious in 9. Dampukh and The Monal were not named at all. Four reasons explain most of the gap.

Their Google listings are complete Fixed by #2	**Them:** Google fed 8 answers that named Pizza Hut. **You:** Google fed 10 answers and named you in none.
They have more reviews AI can quote Fixed by #3	**Them:** TripAdvisor was the top source in answers that named Domino's. **You:** TripAdvisor named you in 6 of 20 answers.
Their facts are easy to read online Fixed by #1	**Them:** Other pizza websites were read 26 times. **You:** Your website was read 0 times.
They are linked with quality and speed Fixed by #3 and #5	**Them:** They are named for fresh, trusted and fast delivery questions. **You:** You are named almost only for price.

Where you already win

Price and value questions, and food blog coverage. thecookbook.pk named you in 7 of the 11 answers that used it. Keep both strong while you fix the gaps.

04 · ACTION PLAN

Six fixes, ranked by impact

Each fix says where the change happens, who owns it and how we will know it worked.

#	Fix	Where	Priority	Effort
1	Get cheezious.com used as a source	Your website	Critical	Medium
2	Complete Google Business Profiles	Google Business Profile	High	Low
3	Win quality and freshness questions	Website, food blogs, TripAdvisor	High	Medium
4	Turn Foodpanda mentions into picks	Foodpanda	Medium	Low
5	Get recommended for fast delivery	Website, Google, Foodpanda	Medium	Medium
6	Show up in TikTok based answers	TikTok and local creators	Low	Medium

Where to make the changes

Your website
Fixes 1, 3, 5

Branch pages, menu and prices as text, structured data, FAQ, ingredients and delivery times.

Google Business Profile
Fixes 2, 5

A complete profile per branch with categories, hours, photos, order link and review replies.

Foodpanda
Fixes 4, 5

Every branch listed, one consistent name, delivery zones and better ratings.

Review sites
Fixes 2, 3, 5

Reviews on TripAdvisor and Google that mention freshness, taste and speed.

Food blogs
Fix 3

Outreach to local blogs, starting with thecookbook.pk.

Social video
Fix 6

Short TikTok videos and local food creators.

1 Get cheezious.com used as a source

Critical

Where: **Your website** Impact: **High** Effort: **Medium** Owner: **Web developer**

What AI showed us

cheezious.com was used in 0 of 60 answers. Other pizza websites, bhaipizza.com and jfcpizza.com, were used in 13 answers each.

Why it holds you back

When AI cannot read your menu, prices and branches on your own site, it quotes other sites and listings instead.

How to fix it

1. One page per Rawalpindi branch: address, hours, phone, delivery areas and the full menu with prices as plain text.
2. Add Restaurant structured data with menu, price range, opening hours and area served.
3. Check robots.txt does not block GPTBot, ClaudeBot or PerplexityBot.
4. Add a short FAQ answering what customers ask AI: delivery time, prices, freshness and pickup.

Done when **cheezious.com appears as a source in the next scan**

2 Complete Google Business Profiles

High

Where: **Google Business Profile** Impact: **High** Effort: **Low** Owner: **Marketing**

What AI showed us

Google was used in 10 answers and named you in none. 8 of those answers named Pizza Hut instead.

Why it holds you back

AI reads Google listings for branch details, ratings and reviews. Thin or missing profiles get skipped.

How to fix it

1. Claim and verify a Google Business Profile for every Rawalpindi branch.
2. Set categories to pizza restaurant and pizza delivery, add hours, menu link, order link and real photos.
3. Reply to recent reviews and ask happy customers to mention what they ordered and how fast it came.

Done when **Google sourced answers start naming Cheezious**

3 Win quality and freshness questions

High

Where: **Website, food blogs, TripAdvisor** Impact: **Medium** Effort: **Medium** Owner: **Marketing**

What AI showed us

Named in 1 of 18 answers about quality and fresh ingredients. Domino's leads here through TripAdvisor reviews.

Why it holds you back

These are the questions where people choose a brand, not just the lowest price.

How to fix it

1. Publish a page on your ingredients and how dough and cheese are prepared each day.
2. Pitch local food blogs. thecookbook.pk already named you in 7 of 11 answers.
3. Ask for reviews on TripAdvisor and Foodpanda that mention freshness and taste.

Target for next scan **Named in 4 or more of 18 quality answers**

4 Turn Foodpanda mentions into picks

Medium

Where: **Foodpanda** Impact: **High** Effort: **Low** Owner: **Operations**

What AI showed us

Foodpanda was used in 30 answers, more than any other site, but named you in only 6.

Why it holds you back

AI treats Foodpanda as the main list of who delivers where. Weak or missing branch listings leave you out.

How to fix it

1. Make sure every Rawalpindi branch is listed with accurate hours and delivery areas.
2. Use the exact same business name everywhere: Cheezious, with no variants.
3. Reply to low ratings and fix the repeated complaints so your rating rises.

Target for next scan **Named in 12 or more Foodpanda sourced answers**

5 Get recommended for fast delivery

Medium

Where: **Website, Google, Foodpanda** Impact: **Medium** Effort: **Medium** Owner: **Operations**

What AI showed us

Named in 0 of 12 answers to the delivery questions, including the quickest delivery question.

Why it holds you back

AI has nothing to quote about your delivery speed, so it names brands that publish it.

How to fix it

1. State your average delivery time and delivery zones on your website and Google profiles.
2. Add the same delivery zones to every Foodpanda branch listing.
3. Ask customers to mention delivery speed in their reviews.

Target for next scan **Named in at least 2 of 12 delivery answers**

6 Show up in TikTok based answers

Low

Where: **TikTok and local creators** Impact: **Low** Effort: **Medium** Owner: **Social media**

What AI showed us

TikTok was used in 7 answers. None of them named you.

Why it holds you back

AI is starting to use short video for local food picks. A small, steady presence is enough to get named.

How to fix it

1. Post short videos that name Rawalpindi and each branch.
2. Work with 2 or 3 local food creators.

Done when **At least one TikTok sourced answer names Cheezious**

05 · 90 DAY ROADMAP

Quick wins first, then proof, then reach

Most of the first month is setup work that only has to be done once.

Days 1 to 30

Fix the basics

Fix 1: branch pages and structured data
Your website

Fix 2: profiles for every branch
Google Business Profile

Fix 4: listings cleaned up
Foodpanda

Goal: your website appears as a source

Days 31 to 60

Build proof

Fix 3: ingredients page and blog outreach
Website, food blogs

Fix 5: delivery times published
Website, Google, Foodpanda

Weekly review requests
TripAdvisor, Google

Goal: first quality and delivery mentions

Days 61 to 90

Grow reach

Fix 6: creator videos
TikTok

Check what moved
All areas

Reset priorities for the next 90 days
Report review call

Goal: close the gap to Domino's

Next scan	Same 10 questions	Each fix re-checked
Nov 27, 2026	**So results compare fairly**	**Done, moving or stuck**

06 · METHOD AND GLOSSARY

How we measured, and what each number means

How we measured

We asked ChatGPT, Claude and Perplexity the same 10 questions local customers ask, from Rawalpindi, through each tool's official API with web search turned on. Each question ran twice on each engine, giving 60 answers between Sep 29 and Oct 28, 2026. We recorded every business named and every website used as a source.

Glossary

Visibility score
Share of all answers that named you, out of 100. 9 of 60 answers gives 15.

Answers naming you
Answers that mentioned Cheezious by name, in any position.

Share of picks
Your part of the answers that named any tracked business. All five add up to 100%.

Priority
How soon a fix should start, set from its impact and effort.

Where
The place the change is made: your website, Google, Foodpanda, review sites, blogs or social.

Score range
How far the score could move because AI answers vary between runs. This scan: [plus or minus X points].

Limits of this report

Answers in the ChatGPT, Claude and Perplexity apps can differ from API answers, and AI answers change from day to day. These numbers show direction, not a guaranteed placement. No one can promise AI recommendations.
